General Notes

These notes describe GFN SDN Controller v.2.5.0 new features and fixed bugs of previous releases. It have to be read thoroughly prior to perform some upgrade in production environment.

1. New Features

- TAP reworked to support Flow Manager. This allows TAP application to be managed in the same SDN domain as other services.
- TAP strict rule templates introduced, which restrict rules misconfiguration.
- L2VPN native Prometheus http end-point.
- VPLS native Prometheus http end-point.
- Multicast native Prometheus http end-point.
- FRR native Prometheus http end-point.
- Web-UI unified to support all service applications in the single console.

2. Fixed Bugs

#1322 L2VPN occasional empty description field.

#1323 VPLS occasional empty description field.

#1354 VPLS add MAC Learning flows on activation

#1356 VPLS remove extra flows on deactivation

#1380 Flow Manager does not remove old flows when restarted

#1404 Flow Manager does not detect UDF flows

#1406 TAP incorrect MPLS label support
